ASTROPHYSICS AND SPACE SCIENCE / *Vol. 244 Nos. 1–2 1996*

Special Issue:

INTERNATIONAL CONFERENCE ON MODERN MATHEMATICAL MODELS OF TIME AND THEIR APPLICATIONS TO PHYSICS AND COSMOLOGY

Guest Editors:
WILLIAM G. TIFFT and WILLIAM J. COCKE

Preface 1–6

DAY 1 SESSIONS 1–3

Session 1. The Redshift

HALTON ARP / The pair of X-ray sources across NGC 4258, its relation to intrinsic redshifts, ejection and quantization 9–22

JACK W. SULENTIC and J. BRETT SMITH / A fresh look at discordant redshift galaxies in compact groups 23–28

W.G. TIFFT / Evidence for quantized and variable redshifts in the cosmic background rest frame 29–56

W.M. NAPIER and B.N.G. GUTHRIE / Testing for quantized redshifts. I. The project 57–63

T.E. NORDGREN, Y. TERZIAN and E.E. SALPETER / The distribution of galaxy pair redshifts 65–71

Session 2. Critical Properties of the Universe

LI-ZHI FANG and YI-PENG JING / Density fluctuations on super-Hubble scales 73–80

S.A. GREGORY / The challenge of large-scale structure 81–88

ANTHONY L. PERATT / Electric space: evolution of the plasma universe 89–103

J.G. LAROS / Gamma-ray bursts: should cosmologists care? 105–109

Session 3. Statistical Methods

W.M. NAPIER and B.N.G. GUTHRIE / Testing for quantized redshifts. II. The local supercluster 111–126

W.I. NEWMAN and Y. TERZIAN / Power spectrum analysis and redshift data 127–141

W. COCKE, C. DEVITO and A. PITUCCO / Statistical analysis of the occurrence of periodicities in galaxy redshift data 143–157

P.A. STURROCK / Zooming in on the redshift problem 159–166

DAY 2 SESSIONS 4–5

Session 4. New Approaches to Cosmology

G. BURBIDGE / Two universes 169–176
JAYANT V. NARLIKAR / Anomalous redshifts and the variable mass hypothesis 177–186
W.G. TIFFT / Three-dimensional quantized time in cosmology 187–210

Session 5. Gravitation and Time in General Relativity

W.J. COCKE / The stress-energy tensor and the deflection of light in 6-dimensional general relativity 211–218
P.C.W. DAVIES / Einstein's greatest mistake? 219–227
ROGER PENROSE / Time, space and complex geometry 229
D.F. ROSCOE / Discrete spatial scales in a fractal universe 231–248
TOM VAN FLANDERN / Possible new properties of gravity 249–261
LEOPOLD HALPERN / On the cosmic limits of physical laws 263–268
MENDEL SACHS / Changes in concepts of time from Aristotle to Einstein 269–281
METOD SANIGA / On the transmutation and annihilation of pencil-generated spacetime dimensions 283–290

DAY 3 SESSIONS 6–7

Session 6. Nuclear and Particle Physics

VINCENT ICKE / Particles, space and time 293–311
AVSHALOM C. ELITZUR / Time anisotropy and quantum measurement: Clues for transcending the geometrical picture of time 313–319
ARI LEHTO / 3-D Period doubling and magnetic moments of particles 321–328
C. WOLF / Relics of the primordial origins of space and time in the low energy world 329–346
L.W. MORROW / Unexplained empirical relations among certain scatterings 347–351
MARTIN KOKUS / Spherical rotation, particles and cosmology 353–356

Session 7. Mathematical Models and Methods

CARL L. DEVITO / A Non-linear model for time 357–369

W.M. STUCKEY / Defining spacetime 371–374

A.P. PITUCCO / Some elementary geometric aspects of extending the dimension of the space of instants 375–385

B.R. FRIEDEN / Fisher information as a measure of time 387–391

List of forthcoming papers 393

The 'KLUWER' LaTeX Style File 395–396
